

# New! W50

## WEDA W50

EDITION 2

**The new professional cleaner for the toughest jobs in public pools.**

### product specification

The Weda W50 is a smaller sized, high capacity Weda cleaner with a pumping capacity exceeding 600 liters/minute (150 GPM). The W50 is offered in two versions: the Standard version for rectangular pools and the Super Auto for irregular shaped pools. Weda recommends this cleaner for pool lengths up to 25 meters.

As with all Weda cleaners the W50 is based on an electrical submersible pump with a steel impeller to safeguard a reliable cleaning that does not get interrupted by the larger particles that are often found in public pools.

Although available in fully automatic versions the W50 is built with a minimum of electronic parts inside the cleaner to ensure maximum reliability and avoid costly service interruptions.

The new laser design allows for fully automatic cleaning with no moving parts for the control functions. All obstacles before the cleaner are identified by the cleaners laser eyes and is automatically steered away from.

**W50 with laser controls gives you a reliable cleaning without interruptions. The pump and brush combination creates the ultimate cleaning results.**

**The W50 is easy to use with a minimum of settings and comes with the following standard or optional equipment**

- Beach control – returns the cleaner back into the water if it runs dry.
- Timer settings
- Several optional voltages
- Remote control
- Separate control box for wall mounting
- Trolley
- Several filter options
- The Weda 2 year factory warranty

**hose discharge option** – For ultimate cleaning of even the smallest particles Weda offers the hose discharge option. The hose is easily connected to the pump discharge and the W50 can then be run automatically or manually over the entire pool area. The bottom sediment is discharged either to the pool filtering system or to a point outside the poolsystem.

**trolley** for transportation around the pool area. The trolley is specifically designed to withstand the tough conditions around the pools and at the same time rugged and strong to guarantee safe transport of the W50.

## technical specifications

Cleaning speed	0,2 meters/second
Cleaning capacity	600 liters/minute
Pump and drive motor	1100 kW asynchronous
Electrical specifications (standard)	110 or 220/230 V
	50 or 60 Hz
Floating cable length	up to 40 meter (130 ft.)
Dimensions (Lx Wx H)	650 x 500 x 300 mm
Filters(standard)	50 to 125 micron PE

## about Weda

Weda, founded in Sweden, in 1919 is one of the oldest companies in the world in the pool cleaning industry. The range today consists of cleaners to fit everything from the smallest public pool up to large outdoor reservoirs for collection of water for whatever reasons and automatic and semi automatic cleaners for drinking water towers and tanks in industrial tanks of various kinds. Weda is active on most major markets world wide through its own subsidiaries, distributors and partners.
