# WEDA under water cleaners – Our cleaners for pools of all types and shapes

Regardless of whether we are dealing with basins in water works, wastewater treatment plants or commercial swimming pools, the bottoms must be cleaned regularly. Weda today offers cleaners for all these applications

The ability to clean without emptying the water is a challenge we at Weda are accustomed to and have successfully resolved for several years.

Maintaining good water quality requires both effective water cleaning processes and effective underwater surface cleaning. Furthermore, effective surface cleaning means the amount of chlorine added to the water can be reduced. This contributes to a better environment for both employees and visitors. One of the many advantages includes a lower risk of allergic reactions.

**Weda Poolcleaner offers today a complete range of cleaners for all public pools.**

The largest water parks, wave pools and Olympic size pools require the highest pumping capacities and the most efficient brushing to remove fine sediment and algae, sand, rubber bands, band aids and whatever else that may have ended up on the pool bottom.

The B600 and B680 cleaners are designed to handle these conditions. The on-board filters collect everything that has been sucked up from the bottom. If needed the filters can be replaced by a discharge hose allowing for discharging to the pools filter system or to waste.

For smaller public pools in schools, hotels, spas and rehabs, etc. the B480 and our latest addition, the W50, are your best choices.

Also these pools require highly efficient cleaners. These cleaners are smaller and easier to handle but still with rotating brushes and strong submersible pumps.

Weda stands for the highest quality, we do nothing besides under water cleaners, and we are proud to offer efficient cleaners that you can rely on for many years of daily use.

The very important authorized service network world wide grants for fast and reliable service when needed so that your cleaner is ready when you need it.

**Please contact us or visit our web site for more details, films, downloads etc.**

## SPECIFICATIONS

### Standard Equipment

	W50	B480	B600	B680
Trolley	Optional	x	x	x
